

Apache: dingetje.homeip.net in default php.ini!

In the apache_1.3.27_dingetje package for 03x there's an error in the php.ini. The default cookies domain is accidently left at dingetje.homeip.net

This may cause some PHP script *NOT* to work!!

Solution:

```
edit /usr/local/lib/php.ini
```

and locate the line with dingetje.homeip.net. Simply replace with your own domain name or set to an empty string. Then save the file and restart Apache with:

```
rc_httpd restart
```
